

Three Tips for Successful Collaboration

As more of your users work from home or anywhere

#1 Provide secure connectivity

Your challenge

Business risk increases when your users bypass your VPN and network security to connect direct to the internet due to slow performance.

Our tip

Our cloud-native proxy architecture secures every user connection, regardless of location, without the limitations of traditional VPNs or appliances.

#2 Enable a fast user experience at scale

Your challenge

Hardware-based solutions and virtualized appliance stacks can't handle the heavy demands of Office 365, Teams, and Zoom coming from your at-home workforce.

Our tip

Our secure access service edge (SASE) architecture enables a reliable connection with no capacity limits and scales elastically as user and traffic demands increase.

#3 Make it easy to get started

Your challenge

Deploying a collaboration solution, such as Office 365, doesn't have to be complex or complicated by hardware solutions that add costs and can't scale.

Our tip

Our purpose-built cloud solution can be deployed in minutes. There's no hardware or software to buy or manage. You can easily enable a fast, secure collaboration experience for all your users across the globe, on- or off-network.

Read this white paper to discover how Zscaler can help your users collaborate wherever they work.
